Examination for MD Degree in Plastic Surgery  
Paper (3) Commentary  
Date:17/4/2016  
Time allowed: one hour  
All questions are to be answered  
Total Assessment Marks: 100

Tanta University  
Faculty of Medicine  
Department of: Plastic and  
Reconstructive Surgery

A 22 – year- old man sustained avulsion injury of the right hand in automobile accident. Examination showed complete loss of the tissues over the dorsal aspect of the hand, including the extensor tendons of the long and ring fingers and the dorsal cortices of the third and fourth metacarpals. There was profuse bleeding from a longitudinal laceration of the palm.

Following irrigation and debridement of the wounds:
