Menoufia University
Faculty of Engineering, Shebin El-Kom
Civil Engineering Department
Date of Exam: 18/6/2016

Subject: Water Collection \& Networks Code: CVE 524
Year : Graduate Diploma
Time Allowed : 3 hours
Total Marks : 100 marks

Answer all the following questions:
(Hazen-Williams formula or chart is accepted and any missing data can be assumed)

## Question 1 (30 marks)

a) What are the types of pipes used in water distribution systems?
b) Given the network shown in Fig. 1, the inflow at A, and outflows at C, D and E. Using Hardy Cross method, find the flows in the individual pipes comprising the network (only one trial is required)

## Question 2 (25 marks)

a) Discuss the purpose of using equivalent pipe?
b) For the system shown in fig.(2), when the flow from the elevated tank at $\mathbf{A}$ is 120 $\mathrm{lit} / \mathrm{sec}$, the pressure at D was $2.5 \mathrm{~kg} / \mathrm{cm}^{2}$. The flow to D must be increased to $165 \mathrm{lit} / \mathrm{sec}$ with a pressure at $D$ equals to $3.5 \mathrm{~kg} / \mathrm{cm}^{2}$. What size of pipe, 1500 ms long, should be laid from B to D (shown dotted) parallel to the existing 250 mm to accomplish this result?

Fig. 2

$$
\Phi=? \mathrm{~mm}
$$

See next page

## Question 3 (25 marks)

Investigate the minor pipes of the distribution system shown in Fig. 3.
The required fire flow $400 \mathrm{lit} / \mathrm{sec}$. Feeders are 1000 ms apart and the normal pressure in the feeders is $2.8 \mathrm{~kg} / \mathrm{cm}^{2}$.

Fig. 3

## Question 4 (20 marks)

a) Compare (using sketches as possible) between different types of surface water intakes.
b) An artesian well is pumped at the rate of $1.6 \mathrm{~m}^{3} / \mathrm{min}$. At observation wells 150 m and 300 m away, the drawdowns noted are 0.75 m and 0.60 m , respectively. The average thickness of the aquifer at the observation wells is 6.0 m . Compute the coefficient of permeability of the aquifer

End of Exam - Good luck
