| Menoufia University | $2^{\text {nd }}$. Semester Exam | Industrial Statistics I |
| :--- | :---: | :---: |
| Faculty of Engineering | $(2014-2015)$ | Time All. 3 Hrs. |
| Production Eng. Dept. |  | Date: June, 15-2015 |
| Higher Studies | Total marks: 100 |  |

## Statistical Tables are Allowed <br> Attempt All Questions:

1: Answer "true" if the statement is true, otherwise, try to correct the statement:
a- The thickness of the sheet metal that a company uses in its manufacturing process is an illustration of continuous data.
b- The mean of a sample always divides the data into two equal halves- half larger and half smaller in value than itself.
c- The mean, the common average, is the most commonly used and understood measure of dispersion.
d- A measure of central tendency is a quantitative value that describes how widely the data are dispersed about a central value.
e- For any distribution, the sum of the deviations from the mean is equals zero.
$f$ - The standard deviation for the set of values $2,2,2, \ldots$ and 2 is 2 .
2: The life, in years, of a certain type of electrical switch has an exponential distribution with an average life $\beta=2$. If 100 of these switches are installed in different systems, what is the probability that at most 30 fail during the first year?

3: A circuit fuse is designed to burn out as the average electric current reaches 20 amperes with standard deviation $\sigma=1.5$ amperes. From a lot of 10,000 fuses, 36 are selected at random and tested for their breaking point. What do you conclude about the amperage specification of the lot if the sample reveals a mean of 20.9 amperes and a standard deviation of 1.5 amperes? Use a level of significance of 0.01 . Construct the OC curve for your test.

4: The following data were collected to determine the relationship between pressure and the corresponding scale reading for the purpose of calibration.

| Pressure, $\mathbf{x}_{i}$ (ib/sq.in.) | Scale reading, $y_{i}$ |
| :---: | :---: |
| 1.5 | 4.8 |
| 1.8 | 5.7 |
| 2.4 | 7.0 |
| 3.0 | 8.3 |
| 3.5 | 10.5 |
| 3.9 | 12.4 |
| 4.4 | 13.1 |
| 4.8 | 13.6 |
| 5.0 | 15.3 |

(a) Find the equation of the regression line.
(b) What is the expected value of scale reading when the value of pressure is equal to $5.5 \mathrm{ib} / \mathrm{sq} . \mathrm{in}$.

Good Luck;<br>Dr. Mohamed Sharaf EI- Din.
