# UTILIZATION OF DIBEZOBARRELENE IN SYNTHESIS OF NEW POLYNUCLEAR HETEROCYCLIC NITROGEN COMPOUNDS 

M.A. Berghot*, A.M. Khalil, and M. A. Gouda<br>Chemistry Department, Faculty of Science, Mansoura University, Mansoura, Egypt. E-mail: dal_mag@hotmail.com

#### Abstract

Phthalazinediones $\mathbf{2 a}_{\mathrm{a}-\mathrm{d}}, \mathbf{5}_{\mathrm{a}-\mathrm{c}}$ and 7 were yielded from the reaction of dibenzobarrelene $\mathbf{1}$ with hydrazides. $\mathbf{2}_{\mathrm{d}}$ was acetylated and sulphonated to get 3 and 4 , respectively. Reaction of 5a-c with formaldeyde in acetic acid gave polynuclear heterocyclic compounds 6 a-c. 7 was reacted with cyclic ketones and aromatic aldehydes to produce thiopheno and acrylonitrile derivatives 8 and 9 , respectively. Benzoimidazole 10 and isoindoledione derivative 11 were yielded from reaction of 1 with o-phenylenediamine in acetic acid and dimethylformamide, respectively. Acetylation of 11, acetamide derivative 12 was obtained. Unexpected product 13 was produced when 11 reacted with 1,2-naphthoquinone4 -sulphonic acid sodium salt . Mixture of 14 and 15 was obtained from reaction of 1 with o-aminothiophenol, while the reaction of 1 with o-aminophenol compound 16 was achieved alone. Reaction of 1 with ethylenediamine gave 18, 19 or 20 depending on the used solvent 21 was produced from reaction of 1 with ethanolamine in acetic acid. The structures of the new synthesizied products were established by spectral data. Antibacterial activity of all these products was tested. Compoud 4 show high significance activity.

## INTRODUCTION

The compounds containing pyridazine ring besides occupying a position of considerable significance in the pesticide activities [Vaclav et al.(1980); Moriya et al.(1983) and Mitsubishi(1980)], are used as plantgrowth regulators [Toshihiko et al.(1983)] hypertensive materials
[Shatalov, et al., (1982)], anti-inflammatory agents [Leonids, et al. (1994)] and anti-fouling agents [Ihara (1980)]. All these biological and physiological activities prompted us to synthesise hithereto unknown compounds containing pyridazine ring incorporated with dibenzobarralene (1) [Giguere et al. (1986); Horyna et al. (1983) and Kalindjian et al. (1995)] of expected biological activity.

## RESULTS AND DISCUSSION

Thus, refluxing of $\mathbf{1}$ and appropriate acid hydrazide namely, salicylic acid hydrazide [Fox et al.(1952)], p-chlorobezoic acid hydrazide [Laroch (1960)], nicotinic acid hydrazide [Fox et al. (1952)] and benzenesulphonic acid hydrazide in acetic acid or dimethylformamide afforded phthalazinedione derivatives $\mathbf{2}_{\mathrm{a}-\mathrm{d}}$ in $72-86 \%$ yield. $\mathbf{2}_{\mathrm{d}}$ was reacted with acetic anhydride and $p$-toluenesulphonyl chloride in presence of drops of triethylamine to yield phethalazines 3 and 4, respectively (Scheme 1).

(4); $\mathrm{R}=\mathrm{SO}_{2}-\mathrm{C}_{6} \mathrm{H}_{4}-4-\mathrm{Me}$

Scheme 1

Further, 2-arylaminoacetic acid hydrazide (namely, 2anilinoacetic acid hydrazide, $2-p$-toludinoacetic acid hydrazide and $2-p$ chloroanilinoacetic acid hydrazide) [Passeron et al. (1963)] were refluxed with 1 in dimethylformamide, phthalazinedione $5_{\mathrm{a}-\mathrm{c}}$ were yielded. Cyclization of $5_{\mathrm{a}-\mathrm{c}}$ to novel heterocyclic compounds $\mathbf{6}_{\mathrm{a}-\mathrm{c}}$ were accomplished by reaction of $5_{\text {a-c }}$ with formaldehyde in acetic acid (Scheme 2).

Furthermore, cyanoacetic acid hydrazide [Fox et al. (1952)] was reacted with 1 in dimethylformamide to produce phthalazinedione 7. Reaction of 7 with cyclohexanaone or cyclopentanone in 1:2 molar ratio under Gewald reaction conditions [Arya (1972)], polynuclear products $8_{\mathrm{a}, \mathrm{b}}$ were achieved in lower yield. Also, reaction of 7 with benzaldehyde or $p$-anisaldehyde in the prescence of sodium methoxide for 15 min . gave acrylonitrile derivatives $\mathbf{9}_{\mathbf{a}, \mathrm{b}}$, respectively (Scheme 2). ${ }^{13} \mathrm{C}-\mathrm{NMR}$ spectrum of $\mathbf{8}_{\mathrm{a}}$ indicated signals at $\delta 21.8,22.1,23.1,23.8,24.5,24.9$, $25.3,25.7$ and 26.9 characteristic for methylene carbons, in addition to signals at $\delta 78.5,139.5,128.2,126.6,125.0,177.3,177.1$ and 174.6 characteristic for spiro, thiophene and carbonyl carbons, respectively.

An extension of our study to synthesis of polynuclear heterocyclic nitrogen compounds [Berghot et al. (2004)], 1 was refluxed with equimolar amount of o-phenylinediamine in acetic acid to afford N acetylbenzimidazole derivative 10 , while N -phenylsuccinimide derivative 11 was formed when the same reaction was carried out in dimethylformamide or dioxane/pyridine. The product 11 was next acetylated with acetyl chloride and triethylamine to give acetamide derivative 12 (Scheme 3). Structures of $\mathbf{1 0}, 11$ and $\mathbf{1 2}$ were confirmed on the spectral data. It is not worthily that the molecular ion peaks of both 10 and 12 are the same but the fragmentation pattern are different.

Also, compound 11 was reacted with 1,2-naphthoquinone-4sulphonic acid sodium salt in water/dimethylformamide ( $1: 1 \mathrm{v}$ ) to give unexepected product 13 in good yield. 13 was formed according to plausible mechanism in Scheme 4. Structure of 13 was established on the basis of mass, ${ }^{1} \mathrm{H}-\mathrm{NMR}$ and ${ }^{13} \mathrm{C}$-NMR spectra. Also, 1 was reacted with $o$-aminothiophenol in acetic acid, dimethylformamide or dioxane/pyridine to yield a mixture of 14 and 15 . Whereas, using $o$ aminophenol under the same conditions isoindol derivative 16 was obtained as a single product. 16 was sulphonated with $p$ toluenesulphonyl chloride in dimethylformamide and in the presence of triethylamine to give the corresponding ester derivative 17 in fair yield (Scheme 5). Structures of $14,15,16$ and 17 were assigned on the basis of their spectroscopic data, especially the mass spectra.

Utilization of Dibenzobarrelene.

Furthermore, treatment of 1 with ethylenediamine in acetic acid afforded a mixture of bis-compound 18 and N -ethylacetamido derivative 19. While a mixture of 18 and 20 was yielded when the reaction took place in dimethylformamide. 18 was formed alone when the reaction carried out in dioxane/pyridine. Acetylation of 20 with acetic unhydride and pyridine turned to 19 (Scheme 6). Structures 20 and 19 were supported by the spectral data.

Finally, treatment of 1 with ethanolamine in acetic acid gave ethyl ester derivative 21 (Scheme 6) as established by ${ }^{1} \mathrm{H}$ and ${ }^{13} \mathrm{C}-\mathrm{NMR}$ spectra.

## ANTIBACTERIAL SCREENING

All new synthesized compounds were subject for testing of the potentional antibacterial activity by the Agar diffusion method [Jain et al. (1971)] Bacellus theringensis and Escherichia coli were used as test organisms. Septazole solution was used as a standerd material. The resulting inhibition zones against these bacteria are listed in table 1 . The present data in table 1 indicate compounds 2b, 2d, 3 and 4 show extremely high activities against both Bacellus theringensis and Escherichia coli. Compounds $5_{c}, 7$, and 8 show high activity with selectivity against Bacellus theringensis and moderate activity against Escherichia coli. Compound 2a, 2c, 5a,b , 6a,,b,c and 9-24 show moderate activities against Bacellus theringensis and Escherichia coli.The obtained results indicated also the phthalazine compounds especially containing sulphonyl or chloro groups caused significant activity against Bacellus theringensis and Escherichia coli. In general, as concluding remarks it may be stated that these results of the in vitro screening of antibacterial potency of the tested compounds serve merely as a guide to their possible chemotherapeutic evedence from in vivo studies in animal experiment in order to ascertain their margin of safety and freedom from undesirable toxic manifestation on vital functions.

In the host, notably with respect to their lack of interferance with natural and acquried immunological mechanism of the body.

## EXPERIMENTAL

## 2-[2-Aroyl]-2,3,4a,5,10,10a-hexa-hydro-5,10-benzeno-benzo [g]phthalazine-1,4-dione derivatives $\mathbf{2}_{\text {a-d }}$ :

## General procedure:

A solution of $1(2.76 \mathrm{~g} ; 0.01 \mathrm{~mole})$ and the corresponding acid hydrazide derivatives ( 0.01 mole ) in dimethylformamide ( 20 ml ) were refluxed for 3-4 hrs. The reaction mixture was diluted with water. The separated product was crystallized from a suitable solvent.

## 2-[2-Hydroxy-benzoyl]-2,3,4a,5,10,10a-hexahydro-5,10-benzenobenzo[g]phthalaz-ine-1,4-dione $\mathbf{2}_{\mathrm{a}}$ :

Crystallized from dimethylformamide-ethanol as white powder in $75 \%$ yield, $3.07 \mathrm{~g}, \mathrm{~m} . \mathrm{p} .=306^{\circ} \mathrm{C}$. IR $(\mathrm{KBr}): ~ v 3387(\mathrm{OH}), 3260(\mathrm{NH})$, $1724(2 \mathrm{CO})$ and $1659 \mathrm{~cm}^{-1}(\mathrm{CO}) .{ }^{1} \mathrm{H}-\mathrm{NMR}$ (DMSO): $\delta 3.2\left(\mathrm{~s}, 2 \mathrm{H}, \mathrm{C}_{11}-\mathrm{H}\right.$ and $\left.\mathrm{C}_{12}-\mathrm{H}\right), 4.9\left(\mathrm{~s}, 2 \mathrm{H}, \mathrm{C}_{9}-\mathrm{H}\right.$ and $\left.\mathrm{C}_{10}-\mathrm{H}\right), 7.0-7.8(\mathrm{~m}, 12 \mathrm{H}, \mathrm{Ar}-\mathrm{H}), 10.8(\mathrm{~s}$, $1 \mathrm{H}, \mathrm{OH}$ ), and $11.4(\mathrm{~s}, 1 \mathrm{H}, \mathrm{NH}){ }^{13} \mathrm{C}-\mathrm{NMR}$ (DMSO): $\delta 177.4,173.8$, 159.1, 142.3, 139.4, 135.2, 129.4, 127.2, 126.8, 125.3, 124.7, 119.6, 117.7, 114.3, 44.9 and 44.7.

## 2-[4-Chloro-benzoyl]-2,3,4a,5,10,10a-hexahydro-5,10-benzeno-benzo[g]phthalazine-1,4-dione ( $\mathbf{2}_{\mathrm{b}}$ ):

Crystallized from dimethylformamide and separated as colorless needless crystal in $77 \%$ yield, $3.3 \mathrm{~g}, \mathrm{~m} . \mathrm{p} .=328^{\circ} \mathrm{C}$. IR ( KBr ): v 3374 (NH), 2964, 2927 (aliphatic C-H), 1727 (2CO) and $1661 \mathrm{~cm}^{-1}(\mathrm{CO})$. MS [ $\mathrm{m} / \mathrm{z}]$ (abundance \%): $430\left[\mathrm{M}^{+}+2\right](3.5), 428\left[\mathrm{M}^{+}\right](8.7), 383(0.9), 319$ (2.2), 277 (1.7), 253 (0.8), 204 (1.0), 202 (7.0), 178 (100), 139 (39), 105 (17.4), 77 (7.8) and 55 (18.2).

2-[Pyridine-4-carbonyl]-2,3,4a,5,10,10a-hexahydro-5,10-
benzenobenzo[glphthalaz-ine-1,4-dione ( $2_{\mathrm{c}}$ ):
Crystallized from benzene-ethanol and separated as colorless needless crystal in $86 \%$ yield, $3.4 \mathrm{~g}, \mathrm{~m} . \mathrm{p} .=322^{\circ} \mathrm{C} . \mathbb{R}(\mathrm{KBr}): v 3163$ (NH), 2996 (aliphatic C-H), 1729 (2CO) and $1660 \mathrm{~cm}^{-1}(\mathrm{CO})$. MS [m/z] (abundance \%): $395\left[\mathrm{M}^{+}\right](17.4), 370(0.2), 316(0.4), 275(0.5), 231$ (0.45), 202 (3.4), 178 (100.0), 152 (1.7), 106 (4.8), and 78 (2.2).

## 2-[Benzenesulphonyl]-2,3,4a,5,10,10a-hexahydro-5,10-benzeno-benzo[g|phthalaz-ine-1,4-dione ( $\mathbf{2}_{\mathrm{d}}$ ):

Crystallized from dimethylformamide -methanol in $72 \%$ yield, $3.1 \mathrm{~g}, \mathrm{~m} . \mathrm{p} .=250^{\circ} \mathrm{C}$. IR (KBr): v $3166(\mathrm{NH}), 2959$ (aliphatic C-H), 1718, $1662(2 \mathrm{CO})$ and $1357 \mathrm{~cm}^{-1}\left(\mathrm{SO}_{2} \mathrm{~N}\right)$. ${ }^{1} \mathrm{H}-\mathrm{NMR}$ (DMSO): $\delta 3.1$ ( $\mathrm{s}, 2 \mathrm{H}, \mathrm{C}_{11^{-}}$ $\left.\mathrm{H}, \mathrm{C}_{12}-\mathrm{H}\right), 4.8\left(\mathrm{~s}, 2 \mathrm{H}, \mathrm{C}_{9}-\mathrm{H}, \mathrm{C}_{10}-\mathrm{H}\right), 7.1-7.8(\mathrm{~m}, 13 \mathrm{H}, \mathrm{Ar}-\mathrm{H})$, and $10.8(\mathrm{~s}$, $1 \mathrm{H}, \mathrm{NH})$.

## Acetic acid-3-benzene-sulphonyl-4-0xo-3,4,4a,5,10,10a-hexahydro-5,10-benzeno-benzo[g]phthalazin-1-yl ester (3):

A mixture of $2 \mathrm{~d}(0.75 \mathrm{~g} ; 0.0017$ mole) and few drops of triethylamine in 10 ml acetic anhydride was warmed for 2 hrs . The separated product was crystallized from benzene-ethanol to give $\mathbf{3}$ in 93 $\%$ yield, $0.75 \mathrm{~g}, \mathrm{~m} . \mathrm{p} .=282^{\circ} \mathrm{C} . \mathrm{IR}(\mathrm{KBr}): v 2880$ (aliphatic C-H), 1707, $1673(2 \mathrm{CO})$, and $1380 \mathrm{~cm}^{-1}\left(\mathrm{SO}_{2} \mathrm{~N}\right)$.

Toluene-4-sulphonic acid-3-benzenesulphonyl-4-0x0-3,4,4a,5,10,10a-hexahydro-5,10-benzeno-benzo[g]phthalazin-1-yl ester (4):

A mixture of $\mathbf{2 d}$ ( $1.3 \mathrm{~g} ; 0.003 \mathrm{~mole}$ ) $p$-toluenesulphonyl chloride $(0.66 \mathrm{~g}, 0.0035 \mathrm{~mole})$ and few drops of triethylamine in methylene chloride ( 20 ml ) was heated under reflux for 3 hrs . The solvent was distilled off and the residue was washed with water, and crystallized from methanol-benzene to give 4 , in $82 \%$ yield, $1.4 \mathrm{~g}, \mathrm{~m} . \mathrm{p} .=269^{\circ} \mathrm{C}$. IR ( KBr ): v 2910 (aliphatic $\mathrm{C}-\mathrm{H}), 1732(\mathrm{CO})$ and $1387 \mathrm{~cm}^{-1}\left(\mathrm{SO}_{2} \mathrm{~N}\right) .{ }^{1} \mathrm{H}-$ NMR (DMSO): $\delta 2.4\left(\mathrm{~s}, 3 \mathrm{H}, \mathrm{CH}_{3}\right), 3.2\left(\mathrm{~s}, 2 \mathrm{H}, \mathrm{C}_{11}-\mathrm{H}, \mathrm{C}_{12}-\mathrm{H}\right), 4.7(\mathrm{~s}, 2 \mathrm{H}$, $\left.\mathrm{C}_{9}-\mathrm{H}, \mathrm{C}_{10}-\mathrm{H}\right)$ and 6.8-7.6 (m, 17H, Ar-H).

## 2-[1-Oxo-2-arylamino-ethyl]-2,3,4a,5,10,10a-hexahydro-5,10benzenobenzo $[\mathrm{g}]-\mathrm{ph}$ thalazine-1,4-dione ( $5 \mathrm{a}-\mathrm{c}$ ): General procedure:

A solution of $1(2.76 \mathrm{~g} ; 0.01 \mathrm{~mole})$ and appropriate arylaminoacetylhydrazide namely anilinoacetylhydrazide, $p$-toluidinofacetylhdrazide or $p$ fchloroanilinoacetylhydrazide ( 0.01 mole ) in dimethylformamide ( 20 ml ) were heated under reflux for 3-4 hrs. The reaction mixture was diluted with water. The separated products were filtered and crystallized from a suitable solvent to give 5a-c.

2-[1-Oxo-2-phenylamino-ethyl]-2,3,4a,5,10,10a-hexahydro-5,10-benzeno-benzo[g]-phthalazine-1,4-dione ( $5_{\mathrm{a}}$ ):

Crystallized from methanol-benzene as white powder in $80 \%$ yield 3.48 g , m.p. $=257^{\circ} \mathrm{C}$. IR (KBr): v 3369, $3200(2 \mathrm{NH}), 1727(2 \mathrm{CO})$ and $1660 \mathrm{~cm}^{-1}$ (CO).

## 2-[1-Oxo-2-p-tolylamino-ethyl]-2,3,4a,5,10,10a-hexahydro-5,10-

 benzeno-benzo[g]-phthalazine-1,4-dione ( $5_{\mathrm{b}}$ ):Crystallized from methanol-benzene in $62 \%$ yield, $2.71 \mathrm{~g}, \mathrm{~m} . \mathrm{p} .=$ $248{ }^{\circ} \mathrm{C}$. IR (KBr): v 3386, $3197(\mathrm{NH}), 2939$ (aliphatic C-H), 1717 (2CO) and $1658 \mathrm{~cm}^{-1}(\mathrm{CO}) .{ }^{1} \mathrm{H}-\mathrm{NMR}$ (DMSO): $\delta 2.4\left(\mathrm{~s}, 3 \mathrm{H}, \mathrm{CH}_{3}\right), 3.2(\mathrm{~s}, 2 \mathrm{H}$, $\left.\mathrm{C}_{11}-\mathrm{H}, \mathrm{C}_{12}-\mathrm{H}\right), 4.7\left(\mathrm{~s}, 2 \mathrm{H}, \mathrm{C}_{9}-\mathrm{H}, \mathrm{C}_{10}-\mathrm{H}\right), 4.8(\mathrm{~s},(1 \mathrm{H}, \mathrm{NH}), 5.4(\mathrm{~s}, 2 \mathrm{H}$, $\left.\mathrm{CH}_{2}\right)$, 6.8-7.4 (m, $12 \mathrm{H}, \mathrm{Ar}-\mathrm{H}$ ) and $9.4(\mathrm{~s}, 1 \mathrm{H}, \mathrm{NH}) . \mathrm{MS}[\mathrm{m} / \mathrm{z}]$ (abundance $\%$ ): $437\left[\mathrm{M}^{+}\right](3.2), 259(1.1), 202(11.3), 178$ (100), 120 (22.4) and 91 (33).

## 2-[1-Oxo-2-p-chlorophenylamino-ethyl]-2,3,4a,5,10,10a-hexahydro-

 5,10-benzeno-benzo[g]phthalazine-1,4-dione ( $5_{\mathrm{c}}$ ):Crystallized from benzene-ethanol as white powder in $75 \%$ yield, 3.4 g, m.p. $=260^{\circ} \mathrm{C} . \mathrm{IR}(\mathrm{KBr}): v 3365,3210(2 \mathrm{NH}), 1725(2 \mathrm{CO})$ and $1658 \mathrm{~cm}^{-1}$ (CO).

Pyrido phthalazine derivatives ( $6_{\mathrm{a}-\mathrm{c}}$ ).
General procedure:
A solution of $5_{\text {a-c }}(0.0017 \mathrm{~mole})$, formaline $37 \%$ ( $0.3 \mathrm{ml}, 0.0035$ mole) and few drops of glacial acetic acid in dimethylformamide ( 10 ml ) were warmed on water bath for $2-3 \mathrm{hrs}$. The reaction mixture was diluted with water. The separated product was filtered and crystallized from a suitable solvent to give $\mathbf{6}_{\mathrm{a}-\mathrm{c}}$.

2-Phenyl-2,3,5a,6,11,11a-hexahydro-6,11-benzeno-benzo[i]-1H-2,4a, ,12a-triaza-anthracene-4,5,12-trione ( $6_{\mathrm{i}}$ ):

Crystallized from benzene to give white powder in $78 \%$ yield, $0.6 \mathrm{~g}, \mathrm{~m} . \mathrm{p} .=274^{\circ} \mathrm{C} . \mathrm{IR}(\mathrm{KBr}): v 2963$ (aliphatic C-H), $1737(2 \mathrm{CO})$ and $1732 \mathrm{~cm}^{-1}(\mathrm{CO}) . \mathrm{MS}[\mathrm{m} / \mathrm{z}]$ (abundance \%): $435\left[\mathrm{M}^{+}\right](13.0), 391(0.9)$, 347 (1.8), 288 (0.8), 257 (10.0), 243 (2.6), 203 (7.8), 178 ( 100.0 ), 161 (52.0), 105 (22.6), 91 (10.4) and 77 (1.7).

2-p-Tolyl-2,3,5a,6,11,11a-hexahydro-6,11-benzeno-benzo[i]-1H-2,4a, 12a-triaza-anthracene-4,5,12-trione (6b):

Crystallized from benzene as colorless crystals in 70\% yield, 0.52 g, m.p. $=275^{\circ} \mathrm{C} . \mathrm{R}(\mathrm{KBr})$ : v 2867 (aliphatic C-H), $1727(2 \mathrm{CO})$ and 1718 $\mathrm{cm}^{-1}$ (CO).

## 2-p-Chloro-phenyl-2,3,5a,6,11,11a-hexa-hydro-6,11-benzeno-benzo[i]-1H-2,4a,12a-triaza-anthracene-4,5,12-trione(6c):

Crystallized from benzene-ethanol as white powder in $80 \%$ yield, $0.64 \mathrm{~g}, \mathrm{~m} . \mathrm{p} .=292^{\circ} \mathrm{C} . \mathrm{IR}(\mathrm{KBr}): v 2851$ (aliphatic C-H), $1742(2 \mathrm{CO})$ and $1730 \mathrm{~cm}^{-1}(\mathrm{CO}) .{ }^{1} \mathrm{H}$ NMR (DMSO): $\delta 3.2\left(\mathrm{~s}, 2 \mathrm{H}, \mathrm{C}_{11}-\mathrm{H}, \mathrm{C}_{12}-\mathrm{H}\right), 4.7(\mathrm{~s}$, $\left.2 \mathrm{H}, \mathrm{C} 9-\mathrm{H}, \mathrm{C}_{10}-\mathrm{H}\right), 5.4\left(\mathrm{~s}, 2 \mathrm{H}, \mathrm{NCH}_{2} \mathrm{CO}\right), 6.2\left(\mathrm{~s}, 2 \mathrm{H}, \mathrm{NCH}_{2} \mathrm{~N}\right)$ and 6.8-7.6 (m, $12 \mathrm{H}, \mathrm{Ar}-\mathrm{H}$ ). MS [m/z] (abundance \%): $471\left[\mathrm{M}^{+}+2\right](0.3), 469\left[\mathrm{M}^{+}\right]$ (0.4), 291 (0.68), 178 (100), 138 (18.0) and 75 (7.1).

## 3-[1,4-Dioxo-3,4,4a,5,10,10a-hexahydro-1H-5,10-benzeno-benzo[g]-

 phthalazin-2-yl]-3-oxo-propionitrile (7):A solution of $\mathbf{1}$ ( $8.28 \mathrm{~g} ; 0.03 \mathrm{~mole}$ ) and cyanoacetic acid hydrazide ( $3.17 \mathrm{~g} ; 0.032$ mole) in dimethylformamide was refluxed for 4.5 hrs . The separated product was recrystallized from benzene-dimethylformamide to give 7; in $65 \%$ yield, $7 \mathrm{~g}, \mathrm{~m} . \mathrm{p} .=310^{\circ} \mathrm{C} \mathrm{R}(\mathrm{KBr}): v 3200(\mathrm{NH}), 2250$ (CN), $1727(2 \mathrm{CO})$ and $1658 \mathrm{~cm}^{-1}(\mathrm{CO}) .{ }^{1} \mathrm{H}-\mathrm{NMR}$ (DMSO): $\delta 3.1(\mathrm{~s}, 2 \mathrm{H}$, $\left.\mathrm{C}_{11}-\mathrm{H}, \mathrm{C}_{12}-\mathrm{H}\right), 3.7\left(\mathrm{~s}, 2 \mathrm{H}, \mathrm{CH}_{2}-\mathrm{CN}\right), 4.6\left(\mathrm{~s}, 2 \mathrm{H}, \mathrm{C}_{9}-\mathrm{H}, \mathrm{C}_{10}-\mathrm{H}\right), 7.2-7.6(\mathrm{~m}$, $8 \mathrm{H}, \mathrm{Ar}-\mathrm{H}$ ) and $9.8(\mathrm{~s}, 1 \mathrm{H}, \mathrm{NH})$. MS [m/z] (abundance \%): 357 [M] (0.2), 318 (0.3), $290(7.8), 259(4.3), 231$ (0.9), $202(5.2), 178(100), 152$ (2.2), 112 (1.8), 82 (0.7), and 55 (1.7)
(4H)-1, 2, 4-Triazepin-7 one derivatives (8a,b):

## General procedure:

To a mixture of 7 ( 1.07 g ; 0.003 mole ), cyclohexanone or cyclopentanone 0.006 mole ) and sulphur ( $0.11 \mathrm{~g} ; 0.0035$ mole) in ethanol ( 30 ml ), morpholine $(0.45 \mathrm{ml}$ ) was added. The reaction mixture was heated on a water bath at $80-90^{\circ} \mathrm{C}$ with stirring for 1 h . Another portion of morpholine ( 0.15 ml ) was added to the reaction mixture and stirred for another 3.5 hrs. The separated product was crystallized from ethanolbenzene to give $8 \mathrm{a}, \mathrm{b}$.
