Faculty of Engineering, Shebin El-Kom
Second Semester Exam Academic Year: 2015/2016 Department: Civil Engineering

Diplom level course, Public Works
Subject/Code: Geometric Geodetic Surveying
/ CVE 535
Date : 20 / 6 / 2016
Time Allowed : 3 Hours

Answer all Questions [ 100 Marks]
Question (1)
The shape parameters of a reference ellipsoid are: $a=6378136.8 \mathrm{~m}$ and f $=1 / 298.267$. Compute the 3D-Cartesian coordinates of a point having the following geodetic coordinates:
$\varphi=31^{\circ} 38^{\prime} \quad 51^{\prime \prime} \quad \mathrm{N}, \quad \lambda=95^{\circ} 18^{\prime} \quad 09^{\prime \prime} \mathrm{E}, \quad \mathrm{h}=117.83 \mathrm{~m}$

## Question (2)

Station A has the following geodetic coordinates (with respect to a sphere having a radius of 6375.149 km ):

$$
\varphi=55^{\circ} \quad 08^{\prime} \quad 36^{\prime \prime} \quad \mathrm{S}, \quad \lambda=127^{\circ} \quad 13^{\prime} \quad 19^{\prime \prime} \mathrm{E}, \quad \mathrm{~h}=39.758 \mathrm{~m}
$$ Compute the 3D-Cartesian coordinates of that point.

## Question (3)

Station D has the following geodetic coordinates with respect to a reference ellipsoid: $\varphi=46^{\circ} 25^{\prime} \quad 49^{\prime \prime} \mathrm{S}, \quad \lambda=156^{\circ} 37^{\prime} \quad 16^{\prime \prime} \mathrm{W}, \quad \mathrm{h}=178.002 \mathrm{~m}$ This ellipsoid has the parameters: $a=6378.135 \mathrm{~km}$ and $\mathrm{f}=1 /$ 298.001. Compute the geodetic coordinates of that point with respect to a spherical surface having a radius of 6367.035 km .

Question (4)
[20]

| Datum | Type | Radius (m) | $\varphi$ |  |  |  | $\lambda$ |  |  |  | h |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Sphere 1 | Geocentric | 6371123 | $27^{\circ}$ | 48' | 13" | N | $33^{\circ}$ | 17' | 29" | E | 128.56 m |
| Sphere 2 | Regional | 6370017 | $27^{\circ}$ | 48' | $20^{\prime \prime}$ | N | $33^{\circ}$ | 17' | 21" | E | 113.74 m |

The table above gives the geodetic coordinates of station $\mathbf{C}$, relative to two different spherical datums, with type and radius as shown. Compute the shift components between them.

## Question (5)

If the shape parameters of the WGS-84 reference ellipsoid are:
$\mathrm{a}=6378137.000 \mathrm{~m} \quad, \quad b=6356752.298 \mathrm{~m}$
And the geodetic coordinates of point $B$ with respect to that ellipsoid are:
$\varphi=28^{\circ} 07^{\prime} 36^{\prime \prime} \mathrm{S}, \quad \lambda=10^{\circ} 12^{\prime} \quad 49^{\prime \prime} \mathrm{W}, \quad h=13.998 \mathrm{~m}$ Compute the geodetic coordinates of $\mathbf{B}$ relative to another geocentric ellipsoid which has the following parameters:

$$
a=6378141.000 \mathrm{~m} \quad, \quad f=1 / 298.251
$$
